912 TV-SAT AND MODULATOR EQUIPMENT

912 BROADBAND AMPLIFIER

Code : **9120244**

Model : **PA-721**

Description
Broadband amplifier for ALCAD equipment. It has one input to amplify the signal coming from all the modules of the installation, and a mutliplexing input for the rest of the channels of the installation. The output level can be controlled by means of an attenuator.

Applications
All MATV and SMATV installations where transmodulators or modulators are incorporated.

Characteristics
Amplifier with high output level, power stage with a hybrid amplifier.
