913 MULTISWITCHES

9X52 FINAL MULTISWITCH, EU PSU

Code : **9130177**

Model : **MB-201**

Description
Final multiswitches for 8 polarities and terrestrial TV with 52 outputs. The outputs are amplified in the satellite IF band. In the terrestrial band they can be configured to function in either active or passive mode. Need to be powered from each individual receiver so that the switching and the amplification of each derived output will function correctly. The external power supply units provide the required voltage to the LNBs for them to function properly.

Applications
Medium-sized collective satellite and terrestrial TV installations. Installed individually, they can distribute to as many as 52 TV outlets. When combined with cascadable multiswitches, it is possible to distribute to 104 outlets on a single line.

Characteristics
Shielded metal chassis with plastic supports. F-type connectors. Power supply connector is a 9.5 x 2.1 mm jack to feed the LNBs.
