941 SENSORS AND ACTUATORS

BED UNIT WITH 3 BUTTONS & CONNECTOR

Code : **9410090**

Model : **LLC-203**

Description
Room peripheral with a connector for pear-type push-buttons (LLC-21x) and three further buttons: a nurse call button with a red LED, a doctor call button with a blue LED and a presence button with a green LED. It allows to place a call from the pear-type push-button (LLC-21x) or from the red (nurse) or blue (doctor) buttons in the peripheral. Once the call has been placed, the red and blue LED make it easy to identify the bed that originated the call, as well as the status of the call, while the green LED informs about the presence of the nurse in the room. This presence is turned on and off with the green presence button. Flush or wall mount.
