ACTIVATOR 5M

Code : **9430069**

Model : **CER-012**

Description

Activating device that is responsible for sending an electromagnetic signal to the tags of the control system of errants carried by the patients to be controlled (CER-030), indicating that they are in a controlled area so that, in this way, the tag sends a alarm signal to the control device and the system. While the tag (CER-030) is within the radius of action of the activator, the activator will activate it continuously until the wanderer leaves the zone. The CER-012 activator must always be placed close to the area to be controlled (door, aisle, etc.), usually above the door to be controlled by means of a wall / ceiling mounting bracket that it incorporates. The CER-012 has a maximum activation distance of 3m.
