903 MAST AMPLIFIERS

AMP UHF-DAB 40 DB LTE MAST 24 VDC

Code : **9030190**

Model : **AM-913**

Description
Broadband amplifiers for masts, compatible with LTE800 mobile signals with amplification band in UHF 470-790 MHz. These amplifiers include a LTE800 rejection filter. They have two inputs to amplify and combine the signals from the antennas and two symmetrical outputs. They are fed through the coaxial cable by any of its outputs from a power supply unit installed inside the building

Applications
Individual digital and analogue terrestrial TV installations which are affected by the transmission of LTE800 mobile phone signals and which require high gain. They amplify and mix the signals from several antennas. The signal obtained can be distributed to a large number of TV outlets.

Characteristics
Shielded zamak chassis, covered by a weather-resistant plastic casing. Easy to open and close, the chassis can be tilted to facilitate manipulation. It can be installed either on a mast, by means of a polyamide clamp, or on a wall. Resistant to sun and water (IP53). Greater insulation between inputs and outputs. F-type connectors for screwing or crimping.
