905 MODULAR AMPLIFICATION EQUIPMENT

BROADBAND AMPLIFIER 110 DBµV

Code : **9050129**

Model : **PA-320**

Description
Broadband amplifier for the terrestrial TV filters and processors of the equipment, for analogue FM radio and digital DAB. Has builtin programming and control system for the channel filtering and processing modules. It has one input to amplify the signal coming from all the terrestrial TV modules of the equipment, plus two inputs for BIII/DAB and FM. Adjustable output level by means of an atenuator.

Applications
Required in all the MATV intallations where any filter or process modules, of 905-ZA series, are used.

Characteristics
High output level amplifier. Bidirectional communication by means of the infrared universal programmer.
