

Ceiling Mounting

Mounting the Device on the Ceiling

- ▶ The device should not be mounted near a ceiling fan or hanging light fixture.
- ▶ The device should not be mounted on a light fixture or smoke alarm, the device needs to be mounted on the ceiling itself.
- ▶ The face of the device needs to be facing the floor.
- ▶ The maximum room size is 4m Width x 5m Length
 - ▶ Maximum of 2m in each direction along the width (X-axis)
 - ▶ Maximum of 2.5m in each direction along the length (Y-axis)
- ▶ The range of height of the device is 2.5-3m from floor to ceiling.
- ▶ There are two possible orientation methods for ceiling mounting, straight or angled at 45 degrees. The angled method works slightly better at a distance.
- ▶ **NOTE:** If doing a ceiling mounting you will still need to go through all the configuration steps on the mobile app, but you can enter in arbitrary numbers because those are for a wall mounting.

Why mount the device at 45 Degrees?

- ▶ The chip (the vBlu) inside the set at a 45-degree angle)

Mounting at 45 Degrees provides better coverage at distance

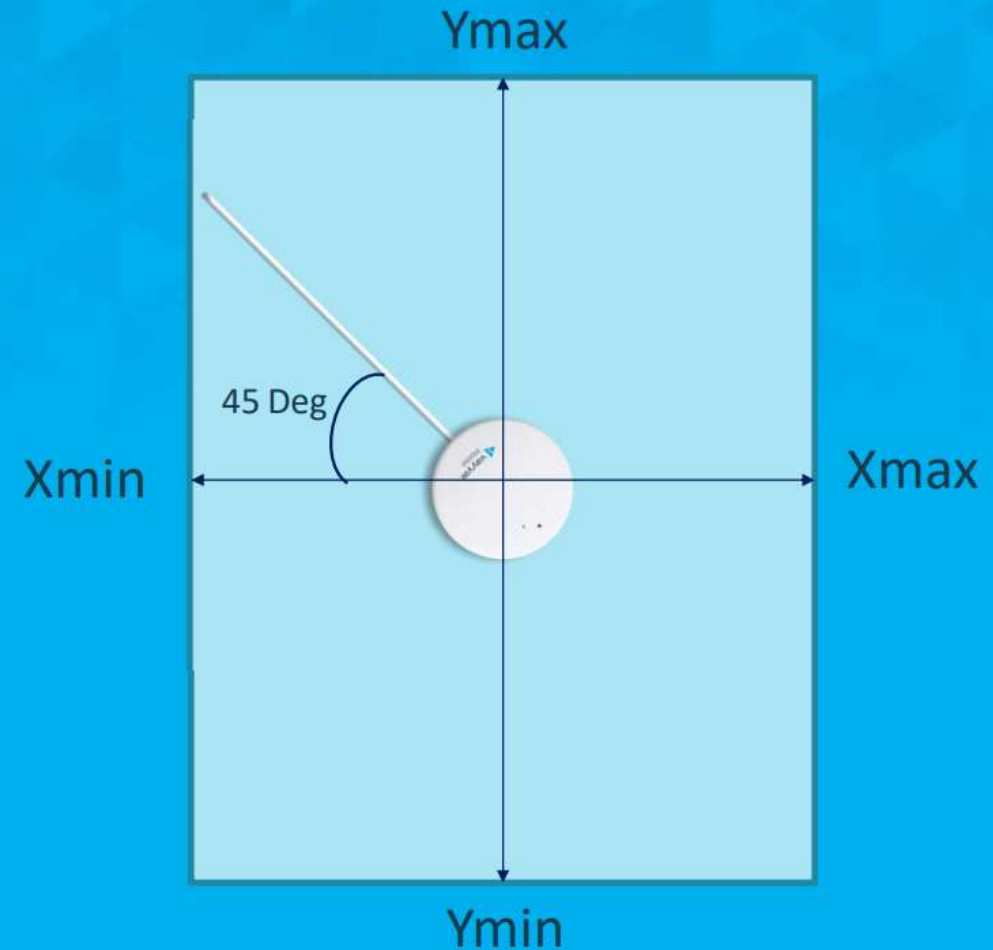

Setting up the grid

- ▶ When mounting on the ceiling, first you must create your Monitoring Grid.
- ▶ To do so, orient the Y-axis so that it is parallel to the longer wall, and so that the X-axis is parallel to the shorter wall.
- ▶ Then choose if you are installing at 45 degrees (pages 6-8) or a Straight Installation (pages 9-11).

45 Degrees Ceiling Installation

Mount the device in the center of the room so that the device cord is between the Y-max and X-min axis . This orientation will mean that the device is on a 45-degree angle pointing towards the bottom right corner of the room.

Gen2 – 45 Degrees Ceiling Installation

Basic Room Configuration

You can see an example of how to set up a basic room configuration here. It is important to note that even though the device has rotated, the monitoring grid is still oriented in the same direction.

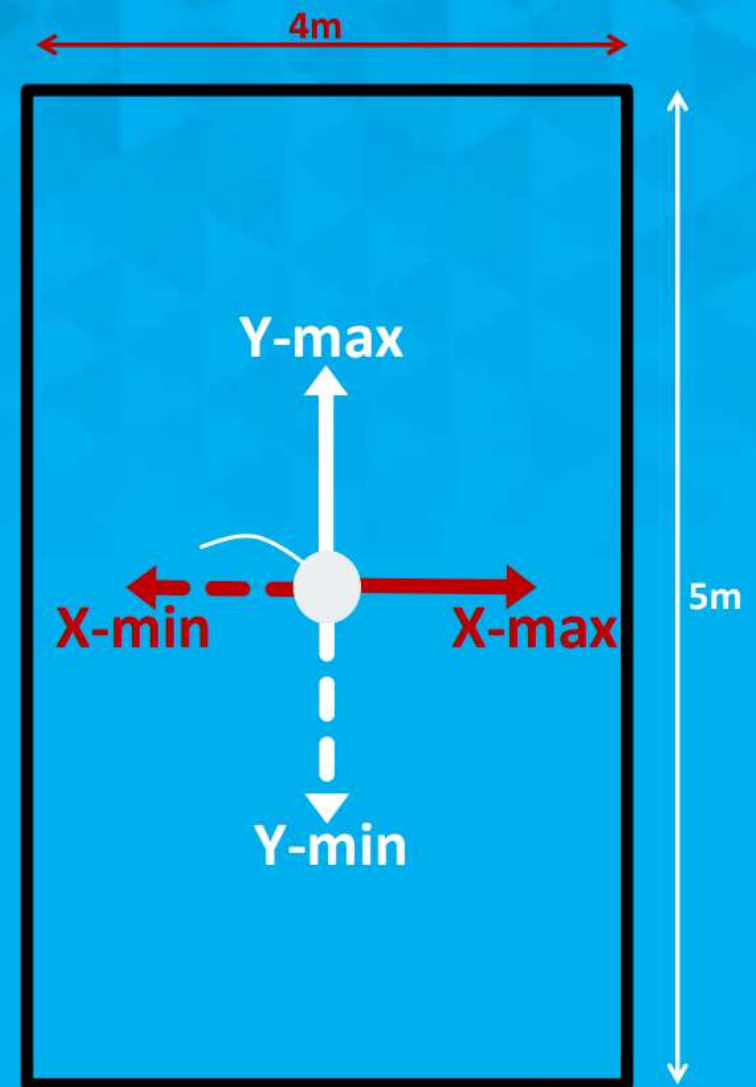

Arena Size

X min = -2

X max = 2

Y min = -2.5

Y max = 2.5

45 Degrees Ceiling Installation

Example of Room Configuration

To configure a subregion, X_{max} and Y_{max} values are always the *largest value*. This means the X_{max} for the bed is 2m and Y_{max} for the bed is 2.5m.

Arena Size

$X_{min} = -2$

$X_{max} = 2$

$Y_{min} = -2.5$

$Y_{max} = 2.5$

Sub-Region - Bed

$X_{min} = 0$

$X_{max} = 2$

$Y_{min} = 1.5$

$Y_{max} = 2.5$

Straight Ceiling Installation

Mount the device in the center of the room so that the device cord is facing the X-min axis. This orientation will mean that the Y-max axis will be to the left of the device.

Straight Ceiling Installation Basic Room Configuration

You can see an example of how to set up a basic room configuration [here](#).

Arena Size

$X_{min} = -2$

$X_{max} = 2$

$Y_{min} = -2.5$

$Y_{max} = 2.5$

Straight Ceiling Installation Full Room Configuration

To configure a subregion, the X_{max} and Y_{max} values are always the *largest numerical value*. This means the X_{max} for the toilet is -1, and the Y_{max} for the toilet is -1.5.

Arena Size

$X_{min} = -2$

$X_{max} = 2$

$Y_{min} = -2.5$

$Y_{max} = 2.5$

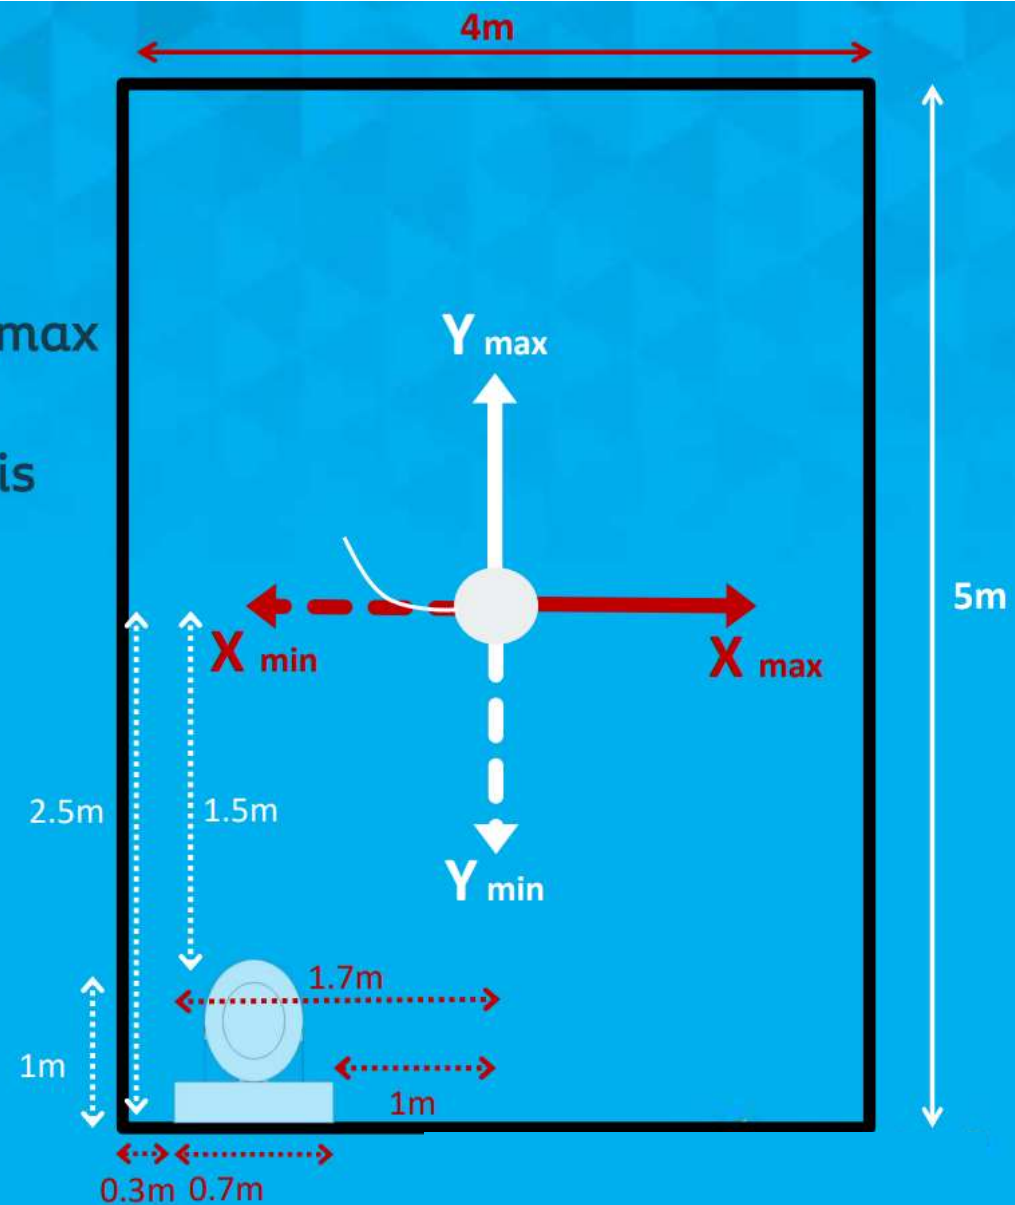

Sub-Region Toilet

$X_{min} = -1.7$

$X_{max} = -1$

$Y_{min} = -2.5$

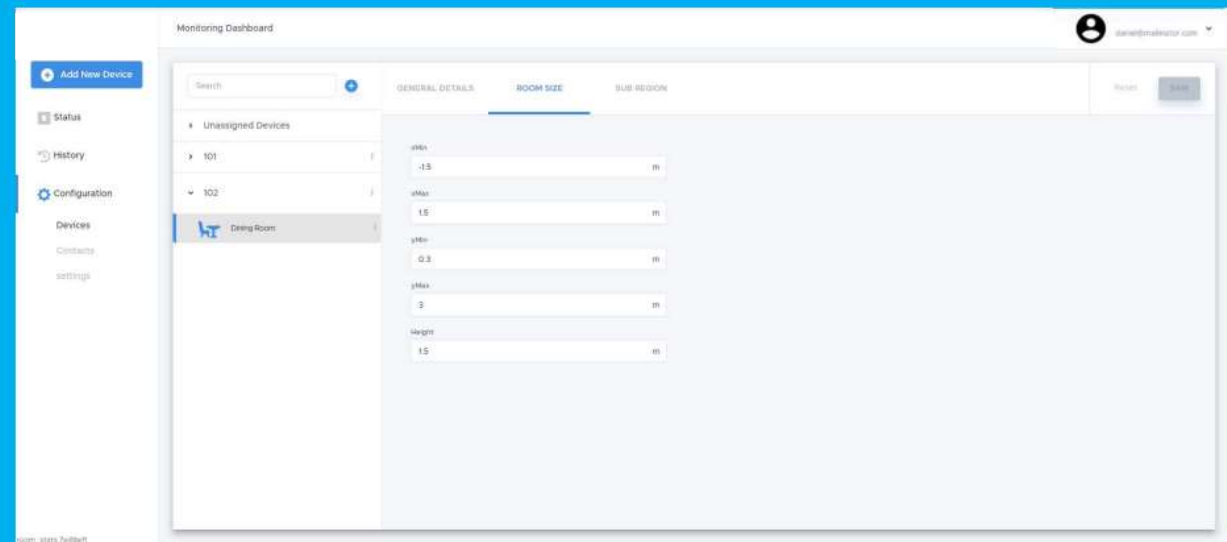

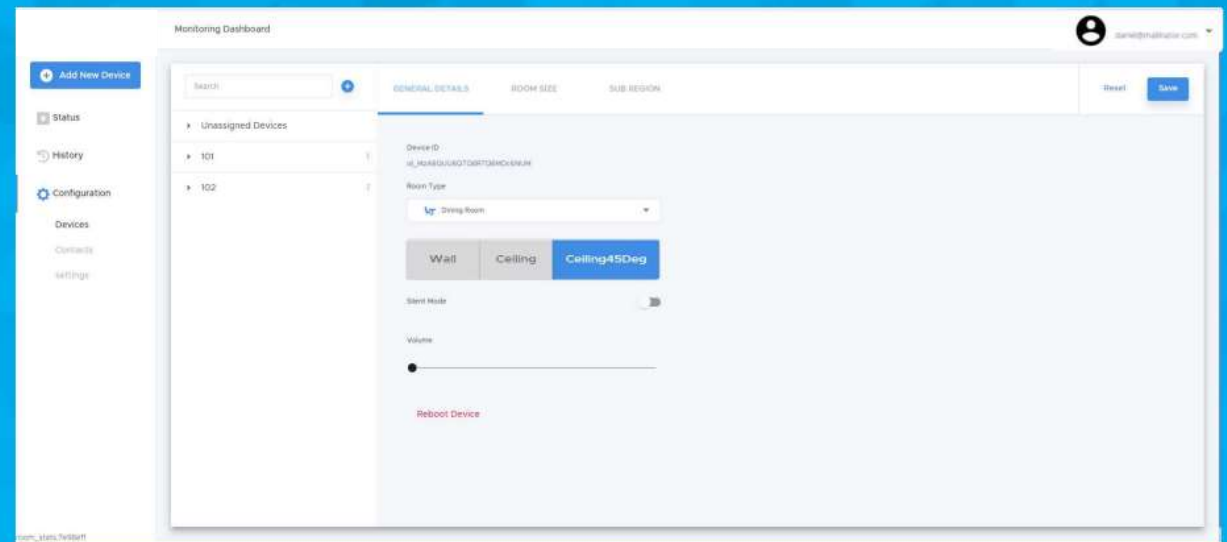

$Y_{max} = -1.5$

Dashboard Use

In order to configure the room for the ceiling:

- ▶ Go to your Dashboard > Configuration > Room > Device.
 - ▶ Once you've found your device, go to the General Details tab.
 - ▶ Then click on "Ceiling" or "Ceiling45Deg" and click "Save."
-
- ▶ Now, when you go to the Room Size tab, you will see tabs to enter in the room dimensions.
 - ▶ Enter the appropriate room dimensions for your device.
 - ▶ The sensor height is the height of the ceiling with a range of 2.5 – 3m.
