

New **everest** distribution amplifiers

WHAT REALLY MATTERS IS WHAT'S GOING ON INSIDE

Squeeze all the juice out of them the moment you take them out of the box

The new range of Everest distribution amplifiers are designed to maximize their efficiency in the smallest space

Zamak chassis: high wear resistance, eliminating the use of **plastic**

The arrangement of its **input and output connectors**, on opposite sides, greatly facilitates its installation and saves space

Independent **variable gain controllers and equalizers** for the terrestrial part and the satellite part

Its **lower heating** increases its useful life

Broadband amplifiers for both **terrestrial TV (117 dBuV)** and **satellite (118.5 dBuV)**

Any doubts? Ask your antenna installer!

Easy **maintenance**, thanks to its external power supply

The **input and output tests** allow checking and adjusting the installation without the need to disconnect the TV signal
